NOTICE OF INSPECTION

TO: Mark Brooks

SUBJECT: PERMIT TO CONSTRUCT WITHIN A PUBLIC WAY # 90-04

LOCATION: Robbins Street

DATE: November 1, 1990

THE FOLLOWING WORK REMAINS TO BE DONE:

Robbins Street appears to have settled at the approaches to the patch over the water service. Also, the edges of the patch are already showing signs of deterioration. I have notified the Highway Superintendent about the condition of this patch and it is our opinion that it does not conform to the standards in the Town of Acton Specifications for Regulating Construction Within Public Ways. The patch should be left in place over the upcoming winter and re-evaluated in the spring.

If you have any questions, or need additional information, please feel free to contact me at 264-9628.

August 6, 1991

**Mr. Mark Brooks  
128 Parker Street, #2-C  
Acton, MA 01720**

**Dear Mr. Brooks:**

I am writing with regard to your request concerning the status of the performance deposit on the water service connection at 10 Robbins Street. In November of 1990 I sent you a copy of my inspection report indicating that the edges of the patch were deteriorating and that settlement may occur over the winter. Consequently, we retained the \$500.00 deposit to ensure a quality end product. Earlier this spring you again contacted me regarding the condition of the patch, and the possible release of the deposit. At that time you may recall that I gave you the name and telephone number of the Acton Highway Department foreman and stated that he would have to make the final inspection and approval. Apparently there was a lack of communication in this regard, and you were not informed of the inspection he made. I have since spoken with the Highway Department foreman regarding the patch, and made an inspection on August 5, 1991. My inspection confirmed the foreman's report that the condition of the patch is unsatisfactory. There is no indication that any action has been taken to stop the deterioration of the joints. In fact, I noticed a marked deterioration in the condition of the patch since my previous inspection.

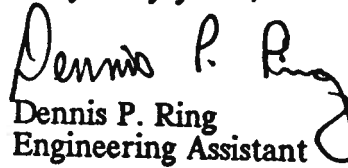

In order to facilitate the release of the deposit, the following steps must be taken:

1. Remove the existing patch.
2. Cut back the edges of the trench to a smooth vertical surface free of sand and loose pavement.
3. Grade and compact the surface of the trench to facilitate a new patch of uniform thickness.
4. Install a new patch in two (2) courses as required by section 2.4.3 of the "Specifications for Regulating Construction within Public Ways". Care should be taken to ensure that the edges are tack coated with asphalt emulsion and thoroughly sealed.
5. As an alternate to items 1-4 above, you may wish to hire a paving contractor capable of making a repair with an infrared heater.

Our goal is to ensure that the final patch will not require repair several years after the installation of the service. The Highway Department has a severely limited budget, and does not have the capital to make these type of repairs. It must be the contractor's responsibility to ensure that his work conforms to the quality and standards set forth by the Town. If you have any further questions regarding this matter, contact me at 264-9628.

Very truly yours,
